Projects

Predication Bike Rental, January 2020 - july 2020
I have made Bike rental count predictions for learning purposes based on environmental or seasonal Problem statements - The objective of this Case is to Predicate bike rental count daily based on the environmental and seasonal settings. I successfully completed my project.

Newerastudy, September 2019 - jan 2020
As for learning purposes, we made a website in which the user or the student can get knowledge for free. On this website, my team and I were going to provide tutorials on artificial intelligence(AI), Machine learning(ML), deep learning(DL), data science(DS), and also some libraries like NumPy, pandas, TensorFlow, etc. In which the user has to give them valuable time to learn and to get everything without giving any money. The main purpose to build it is to give knowledge to those students who are not well financially and have not sufficient money for joining classes.

Textnp, February, 2020

I made this project using python django. It is a simple text based website and in the website the user will have multiple options to choose on the basis of the user's option site will remove punctuation and can see most frequent words as dictionary mean word and their frequency.
